## SKILLS

HTML

SASS

JavaScript

React.js

Node.js

Nest.js

Git

## EDUCATION

Industrial Economic Engineer

Ecological University Bucharest

2017 - 2021

## PROFILE

I like designing and developing full-stack web applications where I can experiment with the latest technologies.

I am very patient and resilient in my work, an analytical person with a keen eye for details.

I have two years of experience working as a web developer at Tremend Software Consulting, and, on personal projects, where I developed valuable skills to work in a team or individually.

## WORK EXPERIENCE

### Web developer

Tremend Software Consulting

2022 - 2023

My daily responsibilities included:

- writing documentation for code
- debugging
- researching and implementing best practices in architecture and development
- client planning

Working with a team of professionals has taught me to develop key attributes:

- problem-solving
- collaboration and communication
- attention to details

One of my favorite applications to work on was a full stack project, which gave the user the ability to showcase his work by uploading pictures and text through a modal form

I built the user interface following React.js best practices, and I also built the backend API that handled the client requests, using express js and nest js.

### Online Marketing Specialist

EvoWise

2018 - 2022

- Manage newsletter campaigns to ensure on-time delivery
- Use CSS and html to create email templates for newsletters.
- Provide customer support
